

GRP FABRICATIONS & STAIRWAYS

The availability and variety of pultruded GRP structural sections, enables the design and fabrication of large and surprisingly complex building structures to be completed quickly and economically. From a simple stairway or mezzanine floor, to a total multi-level walkway and access platform network!

GRP stairway with multi-level mezzanines

GRP Walkway and Handrailing, with moulded Baffle Boards for reservoir installation

GRP materials offer total corrosion resistance and long term reliability. Maintenance requirements are virtually eliminated as GRP never needs painting!

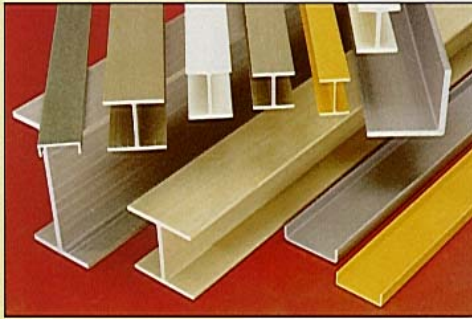

Lightweight structures also reduce installation and manpower costs.

← Complete elevated walkway and access platform system constructed entirely from GRP materials

→ Completely submersible GRP access walkway systems. Maintenance free, strong and durable. Gritted walkway surface ensures non-slip safety in all conditions.

GRP pultruded structural sections have a high strength-to-weight ratio and an outstanding resistance to creep, fatigue, corrosion, and chemical attack. Available in various profiles and in lengths up to 6m - often from stock. They are easy to cut, and easy to manhandle due to low weight, and can be either mechanically affixed using standard conventional fasteners, or epoxy-bonded.

Complete support structures, flooring and handrailing in sturdy GRP

Combined access walkway and rotating filter spray arm

- FLEXIBILITY OF DESIGN
- SIMPLER FABRICATION and INSTALLATION
- LONG TERM COST EFFECTIVE RELIABILITY
